**Formula <sup>[4]</sup>**

Day Rate: \$ Day Rate Amount / XHour day base  
 XHour day base - Standard 8hr day = Number of hours beyond standard 8hr day  
 Number of hours beyond standard 8hr day x 1.5 OT = Number of OT hrs built into day rate  
 Number of OT hrs built into day rate + Standard 8hr day = Total number of both, standard & OT hours  
 \$Amount / Total number of both, standard & OT hours = **Regular hourly rate of pay**  
**Regular hourly rate of pay** x Standard 8 hour day = regular time day rate for standard 8hr day  
**Regular hourly rate of pay** x 1.5 OT = **time and a half hourly rate of pay**  
**Regular hourly rate of pay** x 2 OT = **double-time hourly rate of pay**  
**Time and a half hourly rate of pay** x Number of hrs over standard 8hr day = OT built into day rate  
 Regular day rate for standard 8hr day + OT built into day rate = \$ Rate Amount

**Example**

\$250/10hrs  
 10hrs - 8hrs = 2hrs  
 2hrs x 1.5 OT = 3 hours  
 3hrs + 8hrs = 11hrs  
 \$250 / 11 = **\$22.7272 <sup>[5]</sup>**  
**\$22.7272** x 8hrs = \$181.8176  
**\$22.7272** x 1.5 = **\$34.0908**  
**\$22.7272** x 2 = **\$45.4544**  
**\$34.0908** x 2 = \$68.1816  
 \$181.8176 + \$68.1816 = \$249.9992

**Footnotes**

[1] A half day rate is billed at 2/3rds (e.g. 0.666667) of your day rate amount.  
 [2] The dashes (e.g. -) are hourly rates that fall below \$10.33/hour the 2022 Minnesota large employer minimum wage. Check MN Department of Labor and Industry website for current minimum wage.  
 [3] Overtime is calculated with 4 hours of OT at x1.5, and 2 hours at x2.  
 [4] This break down calculates x1.5 OT. Calculating a +12 hour day base with x2 OT has steps not listed.  
 [5] Safest to go to the ten thousandth decimal point (e.g. 0.9999) when calculating hourly rate.
